The Movie Review Word Length Profiler

Week 1 Assignment - Problem 5 | Java

Problem Summary

Split a review on whitespace and count Short words (1-4 characters), Medium words (5-8 characters), and Long words (9 or more characters).

Java Solution

```
public class Main {
    static void classifyWordLengths(String review) {
        int shortCount = 0, mediumCount = 0, longCount = 0;
        String trimmed = review == null ? "" : review.trim();
        if (!trimmed.isEmpty()) {
            String[] words = trimmed.split("\\s+");
            for (String word : words) {
                int length = word.length();
                if (length <= 4) shortCount++;
                else if (length <= 8) mediumCount++;
                else longCount++;
            }
        }
        System.out.printf("Short: %d | Medium: %d | Long: %d%n",
            shortCount, mediumCount, longCount);
    }
    public static void main(String[] args) {
        classifyWordLengths("This movie was absolutely fantastic and thrilling");
    }
}
```

Sample Output

```
Short: 3 | Medium: 1 | Long: 3
```

Complexity / Key Notes

Time: O(c), where c is the number of characters in the review. Extra space: O(c) for the word array. As in the source, token length includes punctuation.
